

NGUYEN VIET THAO

SOFTWARE ENGINEER INTERN

Ho Chi Minh City, Vietnam | 0968 528 596 | nvietthao2005@gmail.com |

GitHub: github.com/thaong2005 | LinkedIn: [Thảo Nguyễn Việt](#)

OBJECTIVE

Third-year Computer Science student at International University - VNU HCMC with hands-on backend development experience across Java, Go, and Python. Built production-style projects using REST, gRPC, and WebSocket architectures with relational databases and Redis caching. Seeking a Backend Developer Internship to contribute to real-world systems while deepening expertise in scalable backend design.

EDUCATION

International University - VNU HCMC | Ho Chi Minh City

Bachelor of Computer Science (3rd-year Student) | Expected Graduation: 2027

GPA: 3.13 / 4.00

TECHNICAL SKILLS

Programming Languages: Java, Go, Python, JavaScript/TypeScript, C

Backend & APIs: REST, gRPC, WebSocket, Spring Boot, Gin, FastAPI, JDBC

Databases & Caching: MySQL, PostgreSQL, MSSQL, SQLite, Redis

DevOps & Tools: Docker, Docker Compose, Git, GitHub

Frontend (Basic): HTML, CSS, Next.js

Core Concepts: MVC Architecture, Object-Oriented Programming (OOP), Authentication & Authorization (JWT, RBAC), Database Indexing, Caching Strategies

Soft Skills: Teamwork, Presentation, Logical Thinking

PROJECTS

Manga Hub — Full-stack Manga Reading Platform | < [mangahub](#) >

Technologies: Go (Golang), Gin, gRPC, WebSocket, PostgreSQL/SQLite, Redis, Next.js (TypeScript/JavaScript), Docker/Docker Compose

- Built a full-stack manga platform with a multi-protocol Go backend (REST / gRPC / WebSocket) and a Next.js frontend.
- Implemented authentication and authorization using JWT and role-based access control (RBAC).
- Developed full-text manga search, reading-progress sync, social interactions, and real-time chat/notifications.
- Optimized performance with Redis caching and database indexing to reduce query latency.

School Management System | < [School Management System](#) >

Technologies: Core Java, HTML, CSS, MVC Architecture, MySQL, JDBC

- Developed a web-based school management system using pure MVC architecture in Core Java.
- Designed and implemented a 10-table relational database schema covering users, semesters, teachers, and grading.
- Integrated the application with MySQL through JDBC and handled CRUD operations across all modules.

Chat Room Message Filter | < [Chat Room Message Filter](#) > - On going

Technologies: Python (FastAPI), WebSocket, REST API, ANTLR4, JavaScript, HTML/CSS

- Built a real-time chat room system combining REST APIs and WebSocket connections using FastAPI.
- Implemented a bad-word filtering engine powered by ANTLR4, with fallback filtering for resilience.
- Designed admin moderation features including managing bad-word lists and kick / mute / unmute controls.
